BikeBoss

THE NEW DYNAMIC MOTORCYCLE WHEEL BALANCER

TECHNOLOGY FOR SMOOTH MOVING VEHICLES

Our BikeBoss

THE FIRST MOTORCYCLE WHEEL BALANCER WITH STATIC AND DYNAMIC BALANCING

THE BIKEBOSS SETS STANDARDS

The first wheel balancer to allow dynamic balancing starting from a wheel width of 3". The balancing process and data entry can be simply done with the help of the soft touch potentiometer/operation. The clearly structured display guides the user through all work steps, making measuring errors a thing of the past.

ONE SYSTEM FOR ALL COMMON WHEEL SIZES

The supplied shafts (15 and 19 mm diameter) and clamps are suitable for all common wheel sizes. The BikeBoss balances motorcycle wheels with single-sided swing-arm suspension without any problems.

PLENTY OF SPACE FOR TIDY AND EFFICIENT WORKING

The BikeBoss does not only fit all common wheel sizes - the wheel suspension on the BikeBoss is also suitable for small scooter wheels from 12" to large 21" enduro wheels. Simply adjust all settings on the BikeBoss and the wheel is immediately ready to go.

The BikeBoss also offers plenty of space for weights and other equipment. With one swift move, everything required for balancing is ready at hand. On request, the BikeBoss is also available with a convenient base cabinet that provides even more storage space for additional balancing accessories.

Clearly structured display and menu guided work steps with special soft touch potentiometer/operation.

Fast wheel mounting on the lift with easy lever mechanism.

The wheel suspension on the BikeBoss is also suitable for small scooter wheels from 12" to large 21" enduro wheels.

Exact positioning and precise weight placement with measuring tape.
